

Lambda_with_map()

Examples:- (Double values)

```
nums = [1, 2, 3, 4]

res = map(lambda x: x * 2, nums)
print(list(res))

# O/P:
# [2, 4, 6, 8]
```

Examples:- (Square values)

```
nums = [1, 2, 3, 4]

res = map(lambda x: x**2, nums)
print(list(res))

# O/P:
# [1, 4, 9, 16]
```

Examples:- (Convert to string)

```
nums = [1, 2, 3]

res = map(lambda x: str(x), nums)
print(list(res))

# O/P:
# ['1', '2', '3']
```

Examples:- (Uppercase string)

```
names = ["neeraj", "ram", "shyam"]

res = map(lambda x: x.upper(), names)
print(list(res))

# O/P:
# ['NEERAJ', 'RAM', 'SHYAM']
```

Examples:- (Length of each string)

```
names = ["python", "java", "c"]

res = map(lambda x: len(x), names)
print(list(res))

# O/P:
# [6, 4, 1]
```

Examples:- (Add two lists)

```
l1 = [1, 2, 3]
l2 = [4, 5, 6]

res = map(lambda x, y: x + y, l1, l2)
print(list(res))

# O/P:
# [5, 7, 9]
```

Examples:- (Multiply two lists)

```
l1 = [1, 2, 3]
l2 = [4, 5, 6]

res = map(lambda x, y: x * y, l1, l2)
print(list(res))

# O/P:
# [4, 10, 18]
```

Examples:- (Add three lists)

```
l1 = [1, 2, 3]
l2 = [4, 5, 6]
l3 = [7, 8, 9]

res = map(lambda x, y, z: x + y + z, l1, l2, l3)
print(list(res))

# O/P:
# [12, 15, 18]
```

Examples:- (Boolean check – even or not)

```
nums = [1, 2, 3, 4]

res = map(lambda x: x % 2 == 0, nums)
```

```
print(list(res))
```

```
# O/P:
```

```
# [False, True, False, True]
```

Examples:- (ASCII values of characters)

```
text = "ABC"
```

```
res = map(lambda x: ord(x), text)
```

```
print(list(res))
```

```
# O/P:
```

```
# [65, 66, 67]
```
